1PUBLISH
Product Data Sheet

1PUBLISH

Overview: 1PUBLISH enables users with specific security rights the ability to create a CD or DVD of searchable PDF's. There are a variety of different ways a user can filter documents because 1PUBLISH utilizes metadata from the 1mage Document Management System as well as your Line of Business (LOB) software. Examples of such metadata would consist of categories, document types, keys, and date ranges.
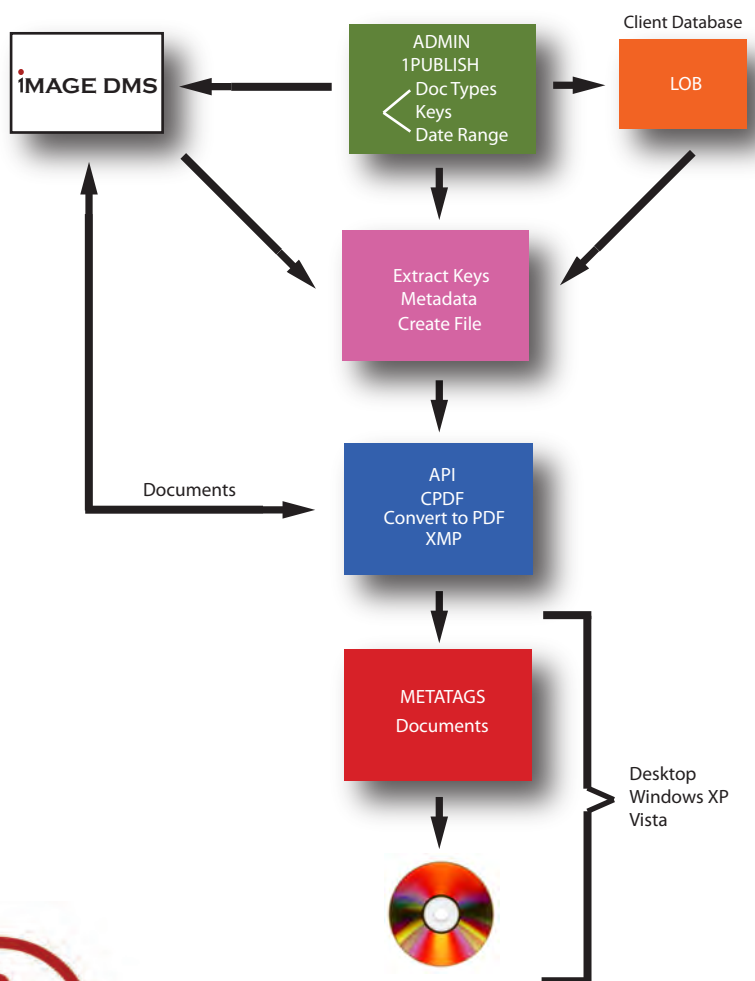

Example: Let's say that your auditors want a comprehensive list of all invoices for April and May of 2007. With the appropriate rights, a user can easily place these documents in PDF format on a CD to be searched by whatever metadata that is associated with each document in Adobe Reader ©. The authoring process does not occur directly from within 1PUBLISH and requires a localized CD/DVD burner as the authoring device.

It is important to note that when documents are moved onto a CD/DVD, that the original documents will still reside on the 1MAGE DMS.

The benefits of 1PUBLISH include easy distribution of large amounts of documents, archiving, compliance, and for auditing purposes. Finally, through the 1MAGE DMS, a secured user can access audit logs of who used 1PUBLISH.

Technicals and Features:

- Document input file types: .tif, .pdf, .jpeg or Cold
- Conversion is accomplished by using CPDF API
- Output File Types: XMP and PDF
- Easily burn your company logo or other information on the surface of the disc through windows authoring
- Requires 1MAGE DMS 8.1e + and UniVerse 10.1, Adobe ©
- Metadata or enhancements can be customized for an additional fee
